

ANUSHKA AGARWAL

📞 +91 6351265177 | ✉ [Email](#) | [LinkedIn](#) | [GitHub](#)

Current Address: Sector XI-T-5, Reliance Greens, Motikhavdi, Jamnagar, Gujarat

Education

Manipal University Jaipur, Rajasthan | June 2023-Present

Bachelor of Technology in Computer Science | 3rd Year

Specialization: Artificial Intelligence and Machine Learning

Kokilaben Dhirubhai Ambani Reliance Foundation School, Jamnagar

Intermediate CBSE BOARD 83.6%[PCM] -2022

Kokilaben Dhirubhai Ambani Reliance Foundation School, Jamnagar

High School CBSE BOARD 93.2% -2020

Skills

Languages: Python, C/C++, SQL

AI/ML Frameworks: Langchain, TensorFlow, Power BI, PyTorch, Pinecone, FastAPI, Qdrant, OpenCV, SQLite, Hugging Face, NLP, Computer Vision, Deep Learning , Recommendation Models

LLM & RAG: RAG architectures, document chunking, model orchestration (Mistral 7B, Ollama)

Concepts: Data Structures and Algorithms, Machine Learning, Cloud Based deployment, Scalable Microservices Database Management Systems, Operating Systems, Agile Software Development

Work Experience

AI/ML Summer Intern| Zenithive, Ahmedabad (Remote)

May 2025 – June 2025

➤ PDF & HTML Chunking + Ingestion Framework

Developed a document chunking pipeline for PDFs with multilingual and hybrid input support.
Applied Markdown-based structured chunking to improve retrieval accuracy.
Added error logging and monitoring to ensure robust ingestion.

➤ AI Form Builder

Built a system to generate forms from user prompts with automatic field-type detection (radio, checkbox, text , numeric).
Used OpenAI API for schema generation and LangChain for prompt orchestration and output parsing.
Applied RAG pipelines to reference existing templates, improving field-type accuracy.
Prototyped an interactive frontend in Streamlit for natural language-driven form creation.

➤ AI Construction Legal Compliance Chatbot

Built a multilingual legal chatbot using LangChain + Pinecone for region- and language-specific queries.
Designed hybrid RAG pipelines with metadata filters, prompt templates, and source-linked answers for accuracy.
Integrated Indic-ColBERT embeddings for direct multilingual retrieval.
Developed a FastAPI backend with session memory and a Streamlit UI for language/region selection and citations.

Projects

➤ Stock Market Prediction Model (Hackathon Project) | [Link](#)

April 2025

Built an XGBoost model to forecast daily stock “Close” prices.
Handled categorical & numerical features, noise, and missing data.
Achieved high accuracy by capturing complex patterns with boosted trees.

➤ Facial Detection System| [Link](#)

March 2025

Built a real-time face detection model using Haar cascade classifiers.
Achieved accurate detection across images, video streams, and varied lighting conditions.
